

Building eLearning Modules with Articulate's AI Assistant

A Step-by-Step Guide for Course Creators

Georgetown University Thrive Center for Children, Families & Communities

Articulate's AI Assistant in Rise 360 can turn your existing training materials — video transcripts, outlines, PDFs, even informal notes — into a structured, ready-to-refine eLearning course. This guide walks through the process step by step, using two real modules built for our Certificate in Infant & Early Childhood Mental Health Consultation (IECMHC) as examples.

Before You Begin: Gather Your Materials

The AI Assistant works best when you give it something to work from. Before you start, collect:

- **A short course description.** What the course is, who it's for, and how it fits into your larger program.
- **Source materials.** Transcripts of recorded trainings, existing PDFs or handouts, program documents, or relevant URLs.
- **Goals and learning objectives (optional).** If your program already has defined objectives, have them handy so you can compare them against what the AI drafts.

Tip: Your inputs don't need to be polished. Conversational language — even a lightly edited excerpt from a speaker's transcript — gives the AI useful context about tone and intent.

Step 1: Describe Your Course and Upload Source Materials

From your Rise 360 dashboard, create a new course and choose to build it with the AI Assistant. You'll see the screen below.

- Write a few sentences in the "Describe your course" field. Name the training, the featured presenter (if any), and where the module fits in your program.
- Drag and drop source materials — for example, a PDF transcript of an existing video training — or paste text and URLs for the AI to reference.

In the example below, we described an existing video training ("IECMH Consultation: In the Day to Day," featuring Brandy Fox) and uploaded its transcript as the source material.

Let's start building your course together

Share your vision and source materials, and we'll create engaging lessons designed for your learners.

Describe your course

Required

existing video training called: IECMH Consultation: In the Day to Day featuring speaker Brandy Fox, Director of Cross Systems IECMH Initiatives Pennsylvania Key. This Module is a lesson for our Certificate in Infant & Early Childhood Mental Health Consultation

A few words is enough to get started, but add as much context as you'd like.

Source materials (optional)

Drag & drop any source materials or [choose file](#)

Supported file types and sizes ⓘ

Paste text or URLs you want me to reference ⓘ

IECMH Consultation- In the Day to Day.pdf

Step 1: Describe the course and attach source materials.

Step 2: Review the Course Details and Learning Objectives

The AI Assistant drafts your course information — topic, tone, audience, and goals — along with a set of learning objectives. Review everything on this screen before moving on.

- Check that the topic, tone, and audience match your intent. Edit any field directly, or use the "Edit with AI" menu to revise it.
- Review each learning objective. Drag to reorder, delete ones that don't fit, or click "Add learning objective" to write your own.
- Notice that the "Goals" field can hold informal, conversational text — in our example it's drawn almost verbatim from the presenter's remarks, and the AI still produced clean, measurable objectives from it.

Take a look at what we've put together for course details

Refine the course information and learning objectives to match your vision. We'll build on this to create your course outline.

Course topic

Practical daily approaches for IECMH consultation

Tone

supportive, professional, encouraging, practical

Audience

Early childhood mental health consultants in the early stages of implementing or improving day-to-day IECMH consultation services within childcare, home visiting, early intervention, or primary care environments.

Goals

narrowing down what it, what it looks like to do mental health consultation in the day-to-day in, in a different service sector like childcare or possibly home visiting, early intervention, primary care. Um, because we really know that this service can be implemented in various ways, in various environments, and it's really tailored to the consumer the consultant is working with. And so it's really important to think about how do you set up a framework or a timeline to organize your service delivery around? And it can be helpful and grounding because this is an approach and you are a workforce that many states are just building within their systems. And you can often feel alone, um, per perhaps kind of like not sure what to do if you don't have a structure or a way to kind of, um, lay out your work.

Learning objectives

Edit with AI

After completing your course, learners should understand or be able to:

- Define the role and purpose of IECMH consultation in day-to-day practice.
- Differentiate IECMH consultation from behavioral health and clinical therapeutic roles.
- Apply models and frameworks for organizing consultation services in various environments.
- Develop effective messaging and engagement strategies for program staff and families.
- Identify and implement structured approaches for intake, observation, and action planning.
- Collaborate with adult caregivers to build their capacity for supporting children's social emotional development.
- Monitor, adjust, and close consultation cases using best practices and practical tools.

+ Add learning objective

Step 2: Review and refine course information and AI-drafted learning objectives.

Step 3: Review and Refine the Course Outline

Next, the AI organizes your content into a course outline: an overview plus a sequence of lessons, each with a title, description, and topic list.

- Use the "Lesson sequence" panel on the left to see the full structure at a glance and drag lessons into a different order.
- Edit any title, description, or topic list directly — or highlight text to get inline AI revision help.
- Add lessons with "Blank lesson" or "Add with AI" if the outline is missing something your program needs.

When you're happy with the outline, you're ready to generate the course — which brings up one more set of choices, covered in the next step.

Step 3: The AI-generated course outline, ready for review and editing.

Step 4: Choose Your Course Content Options

When you move forward from the outline, a "Course content options" box appears. The choices you make here shape how the AI builds your draft.

- **Generate lessons as "Text and interactive content." (Recommended.)** Rise will build the lessons with interactive blocks — not just walls of text — which gives you a much stronger starting draft.
- **Turn on "Add AI images." (Recommended.)** Generation takes a bit longer, but the images give each lesson visual structure right away, and any image can be easily edited or regenerated later. You can always swap in your own media during polishing.
- **"Add a final quiz" — pause and consider.** Before toggling this on, think about where the quiz best serves your program. A quiz built here lives inside the Rise module: it's quick to create and keeps everything in one place, but your options for question types, scoring, and reporting are limited. Building the quiz directly in Canvas LMS instead gives you more control over question design, attempts, and grading — and learner results flow into the Canvas gradebook, where you can actually track and analyze the data. If completion data matters to your program, Canvas is usually the stronger choice.

When you've made your selections, click "Create course draft" and the AI Assistant will generate draft lessons in Rise.

Step 4: Course content options — interactivity, AI images, and the final quiz decision.

Step 5: Generate Lessons and Polish in Rise 360

Once the outline is approved, the AI Assistant builds out draft lessons in Rise 360. Treat this as a strong first draft, not a finished product:

- Read every lesson against your source materials. Correct anything the AI paraphrased loosely or emphasized differently than your program does.
- Add your own media — video clips, images, custom graphics — and interactive elements like knowledge checks, flashcards, and scenarios.
- Apply your program's branding, fonts, and colors so the module matches the rest of your certificate or training series.

Step 6: Share for Review

When the module is ready for feedback, publish it to Review 360 and share the review link with your team. Reviewers can leave comments directly on the content without needing an Articulate account.

Examples: Two IECMHC Modules Built This Way

Applying the Georgetown ECMHC Model: Practical Strategies for Early Childhood Settings — a five-lesson course built from program goals and learning objectives, covering the model's principles, phases and types of consultation, implementation strategies, and case studies. [View in Review 360](#)

IECMH Consultation: In the Day to Day — a module built from the transcript of an existing video training featuring Brandy Fox, converted into a five-lesson course on practical daily approaches for IECMH consultation. [View in Review 360](#)

Tips for Best Results

- **More context is better.** The AI can only work with what you give it — a rich description and strong source materials produce a noticeably better outline.
- **You are the expert.** The AI's drafts are a starting point. Your subject-matter expertise is what makes the final module accurate and aligned with your program.
- **Check objectives against your program.** If your certificate or program has official learning objectives, reconcile the AI's versions with them before generating lessons.
- **Iterate with AI, not just around it.** It's often faster to regenerate a lesson description or objective with "Edit with AI" than to rewrite it by hand.
